PROFESSIONAL SUMMARY

Full-stack developer with six years building commercial software that businesses run on daily. Laravel and PHP 8 on the back end — domain-driven service layers, versioned REST APIs, policy-based authorization, queues and caching — with React, Next.js and TypeScript on the front. I have taken four platforms and five mobile apps from first requirement to production support, including a multi-vendor marketplace and a licensing and billing control plane built as a 14-module modular monolith. Computer Systems Engineer, graduated with honours. Arabic-first (RTL) by default.

CORE STACK

Backend	PHP 8.4, Laravel 12, REST API design, Domain-Driven Design, modular monolith, service layer, policies & RBAC, Sanctum / Passport, queues & scheduled jobs, Octane & Horizon, WebSockets, RabbitMQ
Frontend	TypeScript, React 18/19, Next.js 16, TanStack Query, Tailwind v4, shadcn/ui, next-intl (RTL), Blade, JavaScript, HTML5, CSS3
Data & infrastructure	MySQL, SQLite, Redis, Elasticsearch, schema design, query optimisation, Nginx, Apache, Linux, PM2, AWS S3, Cloudinary, Git
Practices	Layered architecture, DTO boundaries, domain events, API versioning, append-only migrations, Larastan (max level), Pint, CI, code review
Mobile	Flutter, Dart, BLoC, Provider, get_it, Clean Architecture, Drift, sqflite, offline-first architecture
Also	Arduino, ESP32, C/C++, embedded control systems

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Independent)	2021 – Present
Self-employed · Damascus, Syria · Remote	

- Own commercial products end to end for pharmacies, restaurants, retail shops and distributors — requirements, architecture, implementation, release and production support.
- Built EvoTech Core, a licensing, subscription and billing control plane: a modular monolith of 14 auto-discovered domain modules communicating only through contracts and domain events, with strict four-layer boundaries, DTO contracts, three authentication audiences and UUIDv7 route keys.
- Paired it with a Next.js 16 / React 19 / TypeScript front end — strict typing, TanStack Query, Tailwind v4 and next-intl, Arabic-RTL by default, deployed across separate subdomains via PM2 and Nginx.
- Enforced quality with Larastan at max level, Pint and CI; documented the API with Scramble (OpenAPI 3.1).
- Delivered five Flutter applications with offline-first SQLite/Drift data layers, versioned migrations, Bluetooth thermal printing and device-bound subscription licensing.

- Built and maintained scalable Laravel backends and versioned REST APIs serving web and mobile clients, in a fully remote engineering team.
- Shipped Trydos Market, a large multi-vendor e-commerce platform built with Domain-Driven Design — separate bounded contexts for Orders, Products, Wallet, Returns, Seller and Invoice — with POS, digital wallet and logistics modules.
- Implemented granular RBAC including per-seller shop roles; integrated four payment gateways (Stripe, Razorpay, MercadoPago, Telr), external shipping and two-way Odoo ERP sync.
- Built Elasticsearch-backed search and Redis caching; ran the platform on Octane with Horizon supervising queues.
- Optimised MySQL schemas and queries for high-traffic modules; moved heavy workloads into queues, background jobs and scheduled tasks.
- Managed cloud storage on AWS S3 and Cloudinary; contributed to architecture decisions and feature planning.

- Advise business and individual customers on hardware, translating a stated budget and workload into a concrete specification; pre-sales consultation and post-sale technical support.
- Held alongside ongoing independent development work.

- Hardware, software and network support for company workstations; system installation, configuration and preventive maintenance.
- Documented recurring faults and fixes to speed up resolution across the support team.

SELECTED PLATFORMS

EvoTech Core — Laravel 12 · PHP 8.4 · Next.js 16 · React 19 · TypeScript

Licensing, subscription and billing backbone for a product ecosystem. 14 domain modules, no cross-module joins, governed by a written architecture constitution and ADRs. URI-versioned /api/v1 with standard response envelopes and machine-readable errors; event-driven side effects.

Trydos Market — Laravel 12 · DDD · Elasticsearch · Redis · Octane

Large multi-vendor marketplace with POS, wallet and logistics. Granular per-seller RBAC, four payment gateways, Odoo ERP sync, heavy scheduling and comprehensive audit logging.

Al Ghadeer Restaurant ERP — Laravel 12 · Blade · React 18 (Vite)

Bilingual restaurant ERP serving a Blade admin panel and a React ordering SPA from one API. Audience-split controllers, session isolation so customer traffic cannot corrupt admin auth, queued FCM dispatch, versioned product cache with model-event busting.

Medical Inventory ERP — Laravel 12 · Passport OAuth2 · MySQL

Pharmaceutical distribution ERP — stock, sales orders, collections and accounting. Clean layered architecture with authorization policies and role-based scoping approximating light multi-tenancy.

Fawateer — Flutter · Clean Architecture · BLoC · Drift

Offline-first Arabic POS: live barcode scanning, Bluetooth thermal receipts, customer debt ledger, and a subscription gate with a 72-hour offline grace period.

EDUCATION

Bachelor of Computer Systems Engineering
(Automation & Control)
University of Aleppo · Graduated 2020
GPA 89.7 / 100 — Excellent with Honours
