

MOHAMAD HARFOUSH HASAN

Computer Systems Engineer · Software Developer · IT & Embedded Systems

Damascus, Syria (Mezzeh)

+963 983 820 430 | mohamad.hasan.it.96@gmail.com

PROFESSIONAL SUMMARY

Computer Systems Engineer (Automation & Control), graduated with honours, with six years of practical experience across software development, IT support, technical sales, and embedded electronics. Built and maintained commercial web and mobile systems used by real businesses, supported company hardware and networks, managed retail IT sales, and designed Arduino and ESP32 based automation and control circuits — including an automatic call-to-prayer system installed in a mosque and a smart home system controlled remotely via Telegram and a mobile application. Practical and adaptable, comfortable taking work from idea to finished product in both technical and customer-facing roles.

PROFESSIONAL EXPERIENCE

IT Sales Specialist · Global 4 Laptop Shop (Damascus, Syria) 2026 – Present

- Advise business and individual customers on laptops, components, and peripherals, matching hardware specifications to technical requirements and budget.
- Provide pre-sales technical consultation and post-sale support, including system configuration, operating system installation, and troubleshooting.

Full-Stack Laravel Developer · Rammaz Software (Remote, Turkey) 2021 – May 2026

Designed, developed, and maintained multiple commercial software systems across different business sectors as part of a remote engineering team.

- Built and maintained scalable Laravel backend applications and RESTful APIs serving both web and mobile clients.
- Developed and shipped marketplace (e-commerce) platforms and a digital wallet solution.
- Integrated third-party APIs and payment services into production systems.
- Optimised MySQL databases and application performance for high-traffic modules.
- Implemented queues, background jobs, and asynchronous processing for heavy workloads.
- Managed cloud storage with AWS S3 and Cloudinary, and contributed to software architecture and feature planning.

Laptop Sales Manager & IT Technician · iApple Shop (Aleppo, Syria) 2021 – 2022

- Managed sales of the store's non-Apple laptop range, advising customers on specifications and matching hardware to their technical needs and budget.
- Delivered software services: operating system installation, driver setup, system optimisation, and troubleshooting.
- Performed light hardware repairs including battery, screen, RAM, and hard-disk replacement, motherboard cleaning, and thermal paste renewal.

IT Support Specialist · BeeTronix (Aleppo, Syria) 2020 – 2021

- Provided hardware, software, and network support for company workstations and peripherals, resolving day-to-day technical issues.
- Performed system installation, configuration, user account management, and preventive maintenance to minimise downtime.
- Documented recurring faults and fixes to speed up resolution across the support team.

GRADUATION PROJECT

Unmanned Aerial Vehicle (Drone) · University of Aleppo 2020

- Designed and built a multi-rotor drone as the final project for the Computer Systems Engineering (Automation & Control) degree.
- Implemented flight stabilisation using inertial sensors (gyroscope and accelerometer) within a microcontroller-based control loop.
- Handled brushless motor and ESC control, power distribution, and wireless remote-control communication.
- Covered the full cycle: mechanical assembly, electronics, control software, calibration, and flight testing.

EMBEDDED & HARDWARE PROJECTS

Automatic Call-to-Prayer (Adhan) System · Installed in a mosque

- Designed and built a microcontroller circuit that broadcasts the call to prayer automatically at the correct time each day, with no manual intervention.
- Used a real-time clock (RTC) module with stored daily prayer timetables, driving the mosque amplifier through relay switching.
- Added an LCD interface for time display and settings, plus manual override controls for the mosque staff.

Smart Home Control System · Telegram bot / mobile application

- Built an ESP32-based Wi-Fi controller for household lighting and appliances, operated remotely from anywhere with an internet connection.
- Implemented control through both a Telegram bot and a mobile application, with relay modules switching the mains circuits.
- Included device status feedback so the user can check the state of each output remotely.

SOFTWARE PROJECTS (INDEPENDENT)

Independent products delivered for shops, restaurants, and small businesses (not affiliated with any employer).

- **Restaurant Ordering & Management Platform (Menu)** — a full restaurant ordering platform: customer ordering site, admin dashboard, order management, kitchen workflow, and delivery management.
- **Warehouse Management System** — ERP solution covering inventory, purchasing, sales tracking, sales-rep management, and reporting.
- **Smart Sales Representative (Mobile App)** — Android app for field representatives to manage customers, create orders, track visits, and sync with the central ERP.
- **Accounting Application** — accounting app for small businesses: income and expense tracking, customer accounts, financial reports, and balance monitoring.
- **Debt Book Application** — digital debt notebook for shops: customer debts, installments, payment history, and financial tracking.

TECHNICAL SKILLS

Embedded & Electronics: Arduino, ESP32, microcontroller programming (C/C++), RTC modules, relay control, sensors, LCD displays, Wi-Fi / IoT connectivity, circuit assembly and soldering

IT Support & Hardware: PC and laptop diagnostics and repair, component replacement (battery, screen, RAM, storage), thermal maintenance, operating system installation, networking, user support

Backend: PHP, Laravel, REST API design, MVC, authentication & authorisation, queues & background jobs, WebSockets, RabbitMQ

Frontend: JavaScript, jQuery, HTML5, CSS3, Bootstrap

Mobile: Android application development

Databases: MySQL, database design, query optimisation

Cloud & Systems: AWS S3, Cloudinary, Git & GitHub, Linux, Nginx, Apache

Business Systems: ERP systems, inventory and order management, marketplace platforms, payment and API integration

EDUCATION

Bachelor of Computer Systems Engineering (Automation & Control) · University of Aleppo

Graduated 2020

- GPA 89.7 / 100 — Excellent with Honours.
