

SOFTWARE DEVELOPMENT PORTFOLIO

Mohamad Hasan

Full-Stack Developer — Flutter & Laravel

I design and ship production mobile apps and backend platforms end to end — from offline-first Flutter apps with device licensing, thermal printing and push notifications, to Laravel ERPs and multi-vendor marketplaces with clean service layers, role-based access and REST APIs. This portfolio highlights nine selected projects across mobile and backend.

PART ONE

Flutter Mobile Apps

Five cross-platform mobile applications — offline-first architecture, local SQLite/Drift databases, Bluetooth thermal printing, barcode scanning, Firebase push, maps & payments, and device-bound subscription licensing. Arabic-first (RTL) and multi-market.

01 — ECOPACK · 02 — SMART AGENT · 03 — FAWATEER · 04 — ACCOUNTING BOOK · 05 —

EcoPack

"A smart waste-cleaning service" — schedule & pay for recycling pickups

A customer-facing app for scheduling and paying for waste-collection and recycling pickups. Residents register, save home addresses with map-based location picking, browse subscription plans, and place recurring pickup orders (bag counts, days, time slots). Localized for the Russian market (backend **wastefree247.com**), with Stripe payments and Firebase push.

● KEY FEATURES

- Token auth, registration & profile with photo upload
- Address book with 2GIS map picker & geolocation
- Browse subscription offers & discounted plans
- Recurring pickup orders with history & tracking
- Stripe payments for orders
- FCM push, in-app inbox, unread badges, mark-all-read
- Promo banner carousel & light/dark/system theming

FLUTTER

Smart Agent

المندوب الذكي

Offline-first order & invoicing app for medicine sales representatives

A fully offline order-management tool for pharmaceutical sales reps. Reps maintain a local catalog of companies, medicines (USD/SYP pricing), pharmacies, warehouses and gifts, then create orders/invoices exported to PDF or printed via Bluetooth thermal printers. Arabic-first (RTL), targeting the Syrian market, on a licensing/subscription model with trial period.

● KEY FEATURES

- Offline CRUD catalogs: companies, medicines, pharmacies, warehouses, gifts
- Orders with line items & optional gift quantities
- PDF invoices (Cairo Arabic font) & filtered PDF reports
- Bluetooth thermal printing with QR codes
- Device activation & subscription licensing with trial mode
- Google Drive backup/restore, import/export/share
- Global search & FCM notification history

Firebase Messaging

device_info + crypto

● HIGHLIGHTS

Feature-first architecture (**core/** + **features/**) with DI service locator · Sophisticated licensing split into single-responsibility services (ActivationService, DeviceIdentityService with salted SHA-256, TimeTamperGuard, OfflineLimitGuard, TrialModeService) · Versioned SQLite migrations · full RTL Arabic with custom slide routes.

Domain: Pharma Sales

Mode: Offline-first

DB: SQLite v14

FLUTTER

Fawateer فواتير

Offline-first Arabic POS, billing & invoicing for small shops

An offline-first point-of-sale app for small retailers — barcode scanning, Bluetooth thermal receipt printing, product/inventory management, and sales invoices with history. It also handles credit sales with a customer debt ledger and gates commercial use behind subscription licensing. Arabic-first (RTL) with English as a secondary locale.

● KEY FEATURES

- Live continuous barcode scanning in the POS screen
- Bluetooth thermal receipts — Arabic rendered as raster bitmaps
- Product/inventory CRUD with cost & low-stock alerts
- Sell-by-weight with live weight↔money entry
- Sales invoices with full stream-backed history
- Customer debt ledger & shareable account statements
- Subscription gate with 72h offline grace & FCM live-unlock

● HIGHLIGHTS

Clean Architecture per feature (domain/data/presentation) with a typed **Failure** taxonomy mapped to localized strings · disciplined append-only Drift migrations (v8) with partial-unique indexes · device-identity licensing via SHA-256 · GoRouter StatefulShell with 5 tabs behind a licensing redirect gate.

Domain: **Retail POS** Arch: **Clean + BLoC** DB: **Drift v8** Scan: **mobile_scanner**

FLUTTER

Accounting Book

دفتر حسابات

Offline multi-currency ledger for tracking customer debts & credits

A personal/small-business accounting app that lets a shop owner record who owes them money and whom they owe, organized by customer and group. It works entirely offline on local SQLite, supports multi-currency (local vs. dollar) balances, and generates/prints/shares PDF account statements. Distribution is gated behind device-bound activation.

● KEY FEATURES

- Customer management with grouping & transaction history
- Debit/credit transactions (due vs. paid convention)
- Multi-currency accounts with UI filtering by currency
- PDF account statements for print/share
- Import/export with daily background auto-backup
- App lock: PIN (brute-force lockout) + biometric unlock
- Device activation & in-app update checking

● TECH STACK

Flutter 3.10 · M3

workmanager

sentry_flutter

crypto (SHA-256)

● HIGHLIGHTS

Robust startup with **runZonedGuarded** + crash service; deferred background init for faster launch · two-layer crash reporting (local capped log + DSN-gated Sentry) · centralized design-system tokens & shared widgets · PIN stored as salted SHA-256 in encrypted storage · Arabic-first RTL with capped text scaling.

Domain: **Accounting** Mode: **Fully offline** DB: **SQLite** Security: **PIN + biometric**

FLUTTER

Al Ghadeer

ملحمة ومعجنات الغدير

Native Android shell for the Al Ghadeer butchery & pastries ordering site

A Flutter WebView wrapper that packages the Al Ghadeer restaurant website (Laravel + React) into a native Android app, layering native capabilities on top of the web experience: push notifications, offline detection, native splash, and system routing for phone/WhatsApp/email links. Domain: food retail (butchery & pastry ordering). Pairs with the Laravel ERP shown later.

● KEY FEATURES

- Full-screen WebView with native splash & logo screen
- FCM push with foreground/background auto-display
- Deep links — notification URL opens in the WebView
- Offline error screen with auto-retry on reconnect
- Smart back navigation & “press again to exit”
- tel/mailto/WhatsApp/off-domain routed to the system
- Auto-granted WebView permissions & native Arabic dialogs

● TECH STACK

Flutter 3.10

webview_flutter

Firebase Messaging

url_launcher

native_splash

● HIGHLIGHTS

Native↔web **token bridge** — a strict JS-channel contract shares the FCM token with the deployed web app · hardened token acquisition (5× exponential backoff + callback polling) · custom User-Agent marker so the React site detects the native shell · documented end-to-end backend↔web↔Flutter↔FCM flow.

Domain: **Food Retail**Type: **WebView shell**Push: **FCM v1**Bridge: **JS channel**

PART TWO

Laravel Backends

Four backend platforms built on Laravel 12 / PHP 8.2 — clean service layers, policy-based authorization, versioned REST APIs powering Flutter apps and React SPAs, financial/accounting modules, and a large-scale multi-vendor marketplace with DDD.

06 — AL GHADEER ERP · 07 — MEDICAL INVENTORY · 08 — TRYDOS MARKET · 09 — EVOTECH CORE

LARAVEL 12

Al Ghadeer Restaurant ERP

Bilingual restaurant ERP — Blade admin panel + React ordering SPA on one API

A restaurant management backend powering two front-ends from a single codebase: a Blade + Bootstrap/Tailwind admin panel for staff, and a React 18 customer SPA for online ordering. It handles the full order lifecycle (table, delivery, takeaway), menu/catalog, delivery zones, weight-based and customizable products, payments, reporting, and Firebase push. Backs the Al Ghadeer mobile app.

● KEY FEATURES

- Forward-only order workflow (pending→accepted→ready→delivered)
- Three order types with scheduled delivery & per-zone fees
- Two-level menu, weight-based & customizable products
- Payment tracking blocking completion until paid
- Customer SPA ordering with localStorage cart & token auth
- Reports/analytics (revenue, order type/status, top products)
- Bulk Excel product import/export; bilingual AR/EN + RTL

● TECH STACK

MySQL

API Resources

React 18 SPA (Vite)

Blade + Bootstrap/Tailwind

kreait/Firebase FCM

PhpSpreadsheet

● HIGHLIGHTS

Audience-split controllers (Admin / API V1 / Public) with a shared ApiResponse trait · **session isolation** — separate customer SPA cookie so customer traffic can't corrupt admin auth · roles & ProductPolicy gates · FCM via google/auth service account through a queued job · versioned product cache with model-event busting; /api/health DB probe.

Domain: **Restaurant** Clients: **SPA + Flutter + Admin** API: **REST V1** Push: **FCM**

LARAVEL 12

Medical Inventory ERP

Pharmaceutical distribution ERP — stock, sales orders, payments & accounting

A Laravel backend managing a medical/pharmaceutical distribution business, connecting a central company/warehouse with pharmacies through field sales reps. It tracks product stock and pricing, sales orders placed at pharmacies, payments/collections, and per-pharmacy financial account statements. Exposes a versioned REST API (with offline-first sync) for a Flutter app, plus a Blade admin panel.

● KEY FEATURES

- Product catalog with per-product pricing & stock levels
- Sales order lifecycle: create, confirm, cancel with items
- Stock-movement tracking via StockService
- Payments/collections recorded per pharmacy
- Per-pharmacy financial statements & ledger
- Rep + admin dashboards with aggregates
- Offline-first mobile sync (bootstrap + changes)

● TECH STACK

Laravel 12 · PHP 8.2

Service + Policies

MySQL

Passport OAuth2

REST /api/v1

spatie/activitylog

PhpSpreadsheet

● HIGHLIGHTS

Clean layered architecture (Controllers→Services→Models) with authorization Policies · **role-based scoping** — reps see only their own pharmacies/orders while admins have broad scope · company/pharmacy/rep relational model approximating light multi-tenancy · Spatie audit logging · an accounting layer (account entries + statements) beyond plain inventory.

Domain: **Pharma Distribution**Auth: **Passport OAuth2**Sync: **Offline-first**API: **REST V1**

LARAVEL 12

Trydos Market

Large-scale multi-vendor e-commerce platform with POS, wallet & logistics

A comprehensive Laravel backend powering a multi-vendor online marketplace serving customers, sellers/vendors and administrators. It handles product catalog and inventory, cart and checkout, order processing and returns/refunds, seller shops and boutiques, wallet/loyalty points, and integrations with payment gateways, shipping carriers, search and messaging — built on a Domain-Driven Design.

● KEY FEATURES

- Multi-vendor shops, boutiques & seller analytics
- Full catalog: categories, brands, attributes, flash deals, campaigns
- Cart, coupons, wishlists, reviews & abandoned-cart recovery
- Orders, invoices & a return/refund request workflow
- Wallet & loyalty points with withdraw requests
- POS & delivery-man (last-mile) API endpoints
- Seller→customer chat, tickets & multi-channel notifications

● TECH STACK

Laravel 12 · PHP 8.2

Domain-Driven Design

Passport + Sanctum + Socialite

Redis

Elasticsearch

Octane + Horizon

Stripe/Razorpay/MercadoPago/Telr

Odoo ERP sync

Gemini translation

● HIGHLIGHTS

Extensive **DDD bounded contexts** (Orders, Products, Wallet, Returns, Seller, Invoice...) · granular RBAC including per-seller shop roles with translated names · multi-gateway payments + external shipping (SkyNet) · **Odoo ERP** product/order sync · Elasticsearch search · heavy scheduling/background jobs, Telegram API & comprehensive audit logging.

Domain: **E-commerce**Arch: **DDD**Scale: **Octane + Redis + ES**Gateways: **5+**

PLATFORM

EvoTech Core

The control plane & licensing/billing backbone for the entire EvoTech product ecosystem

An API-first platform that every EvoTech product (Smart Agent, Fawateer, Accounting Book, the Restaurant ERP/POS suite, pharma warehouse, IoT controllers...) authenticates against, is licensed by, billed through and reports to via one central REST API. Three surfaces in one: a bilingual marketing website, an authenticated subscriptions/licenses/billing dashboard, and a product-to-platform integration API — a Laravel 12 **modular monolith** built to scale to 100+ products & 1000+ tenants.

● PLATFORM CAPABILITIES

- Sanctum auth with password policy & per-account/IP throttling
- Multi-tenant companies & auto-scoped customers
- Subscription lifecycle with plan snapshotting & expiry sweep
- Licensing: activation slots, suspend/revoke, event ledger
- Ed25519-signed **offline license tokens** for devices/IoT
- Billing: auto-issued invoices + immutable payment ledger
- Download Center: checksummed releases & product self-update
- Notifications, audit log & KPI reports across modules

● TECH STACK

- Laravel 12 · PHP 8.4
- Sanctum 4
- MySQL / SQLite (test)
- Scramble OpenAPI 3.1
- Ed25519 / ext-sodium
- Larastan (max) · Pint · CI
- Next.js 16 · React 19
- TypeScript strict
- Tailwind v4 · shadcn/ui
- TanStack Query
- next-intl · RTL

● ARCHITECTURE HIGHLIGHTS

Modular monolith with microservice-ready seams — 14 auto-discovered domain modules communicating only via contracts & domain events (no cross-module joins), governed by a formal architecture "constitution" and ADRs.

● ENGINEERING DEPTH

Strict 4-layer modules (Presentation → Application → Domain → Infrastructure) with DTO boundaries · URI-versioned **/api/v1** with standard {data,meta,links} success and machine-readable {error:{code,message,trace_id}} envelopes · three auth audiences (staff Sanctum, product API-key guard, public signed URLs) · UUIDv7 route keys over internal PKs · event-driven side effects (SubscriptionActivated → auto-license + auto-invoice) · Arabic-RTL-default bilingual on both tiers · decoupled deployment (website / api / app subdomains via PM2 + Nginx). **Status:** Phases 0–5 complete & verified; Phase 6 (Download Center) done.

Modules: **14 domains** Auth: **3 audiences** Scale target: **100+ products** Frontend: **Next.js 16**

Let's build something.

Thank you for reviewing my work. I'm available for Flutter mobile development, Laravel backend engineering, and full-stack product delivery.
